

HELP FILE

1. Stored Procedure Usage in CRUD Operations:-

- In this CRUD operation, we have utilized stored procedures for database interactions.
- These stored procedures are used for creating, reading, updating, and deleting data from the database.

2. Coffee Shop Management System PDF:-

- A PDF file named **Coffee Shop Management System.pdf** will be provided.
- This PDF contains details about 6 tables used in the Coffee Shop Management System, including the structure and relationships between them.

3. Stored Procedures for 6 Tables

- For each of the 6 tables mentioned in the Coffee Shop Management System PDF, we have created respective stored procedures.
- These procedures are stored in the **Stored Procedures folder** and can be used for database operations on the tables.

4. Client-Side Validation

- Note: You do not need to manually add validation messages for required fields in the controller files, as the framework provides default messages.
- However, if you wish to customize the validation messages, you can do so by adding the necessary attributes in the respective model or controller file.
